

Put your data to work. Make it accessible. Make it an integral part of improving your process and product.

COLLECT & ARCHIVE

Trove records test history by pulling files from networked test stations to a central server. Trove automatically manages a database of results, file deletion, aging out, and keeping a specific duration of test data onboard the local test station. Trove handles network interruptions, multiple test stands, and is IT-friendly.

QUERY & DISPLAY

Trove allows user to easily search and parse data tables as well as return a set of data that can be used for analysis (e.g., return all tests that failed metric 5 from test stand 2 over the last month). Trove turns cryptic database queries into easy to understand parameters that are based on the data tables and database contents.

REPORT & UTILIZE

How often does your data sit unused, only to be unburied for a warranty claim? One of Trove's most powerful features is the ability to batch process historical data using new processing instructions to run what-if scenarios and provide additional insights into the existing data.

About Signal.X Technologies

Since 2004, Signal.X has specialized in Test & Measurement Products for noise & vibration (NVH), production and laboratory test automation, functional test design, large data management, and custom application development.
